PROFILE

Product Designer with 7 years of experience. I design experiences that hold up on both substance and form, from user research through to production.

I'm at ease with complex business products, particularly SaaS and CRM, balancing business logic, technical constraints and ease of use. I also enjoy innovation projects and AI POCs, where you move forward through uncertainty without loosening your design standards.

I care about making interfaces accessible and consistent, about mentoring junior designers and apprentices, and about staying close to the technical side of things.
